PROFESSIONAL EXPERIENCE (7+ Years)

Results-driven **Full-Stack Developer** with **7+ years** of experience delivering scalable, secure, and high-performance enterprise applications across **Financial Services, Logistics, and Telecommunications** domains. Expert in **Java, Spring Boot, Microservices Architecture**, and **RESTful API** development, with strong proficiency in **Angular, React, TypeScript**, and **modern responsive UI design**.

Proven track record of building cloud-native solutions using **AWS (EC2, S3, Lambda, RDS, CloudWatch)** and implementing robust **CI/CD pipelines with Git, Jenkins, and GitHub Actions**. Strong expertise in application security (**OAuth2, JWT**), database optimization (**PostgreSQL, MySQL, Oracle**), and automated testing (**JUnit, Mockito, Selenium, Karma/Jasmine**).

Recognized for driving performance optimization, resolving complex technical challenges, and leading development efforts in **Agile methodologies (Scrum/Kanban)**. Committed to delivering reliable, maintainable, and scalable solutions that align with business goals.

INFINITE COMPUTER SOLUTIONS – Full Stack Developer

Full Stack Development – VERIZON (Telcom)

 **New Jersey**

 **Feb 2025 - PRESENT**

- Built internal **GenAI-driven pipelines** using Python to parse **Figma** design specs and automatically generate base React component structures, streamlining front-end scaffolding and improving design-to-code turnaround time.
- Developed Python scripts for **API integration and data extraction**, transforming Figma JSON outputs into structured inputs for component generation workflows.
- **Developed and maintained complex** customer-facing components in a large-scale **Retail Companion Web** Application using **React and Redux**, following Verizon's modular design and performance guidelines.
- **Implemented dynamic UI** features like **Florida 55+ Discount notification banners**, leveraging conditional rendering and business rule parsing from **API response structures** (e.g., checking **data.subAccounts.shared.addons** for eligibility).
- Integrated **feature flags** (Evergreen, Performance flags) to control **rollout behavior**, A/B testing, and conditional logic in production.
- **Designed and implemented** an internal GenAI-powered project ("Figma2React"). Used the **Figma API** (via design ID and node ID) to **extract structured JSON** representations of UI designs.
- Leveraged Python-based orchestration with **LangGraph** to manage **LLM** prompting, state control, and flow memory for **hierarchical layout analysis** and **UI component extraction**.
- Applied Python tooling (**Figma2React**) in active sprints to **accelerate prototyping**, reduce repetitive boilerplate work, and ensure alignment between design and production standards across internal projects.
- Applied the **GenAI** tooling in active sprints to accelerate **component prototyping**, ensure visual fidelity with **Figma**, and **reduce repetitive boilerplate** work across multiple Verizon internal projects.
- Worked with **screen resolution** breakpoints (e.g., **15" portrait, 39" kiosk screens**) to build **responsive layouts** and logic-driven component behaviors for Verizon in-store displays and kiosk modes.
- Wrote automation scripts for **feature testing, conditional logic validation, and layout responsiveness**, complementing **Jest** and **React Testing Library** coverage in React/Redux applications.
- **Contributed** to logic for **auto-navigation timers** and attract loop animations, using **timeouts** and user interaction **handlers** based on resolution and mode flags (isDiscoveryTool, isStaticAttractLoop)

Angular Development – BRIGHTSPEED (Telcom)

 **New Jersey**

 **Feb 2023 - Feb 2025**

- **Developed a web framework** using **standalone Angular** for an enterprise telecom application.
- Created new reusable components and implemented Angular route guards (AuthGuard, CanActivate, CanDeactivate) to enhance page security and navigation.
- **Enhanced user experience** with **responsive UI components** and **dynamic feature flagging** using **PrimeNG** and custom Angular services.
- **Developed and maintained a complex Angular application** for **event and change management**, ensuring scalability and performance.
- **Managed application state and asynchronous operations** using **RxJS**, optimizing data streams and component interactions.
- **Implemented comprehensive error handling and logging mechanisms**, improving debugging and troubleshooting efficiency.
- **Utilized Git for version control**, conducted **code reviews**, and maintained coding standards to ensure quality and consistency.

WEB Development – IRON MOUNTAIN (Logistics)

 New Jersey

 Feb 2023 - Feb 2024

- Developed RESTful APIs for CRUD operations and user services such as task creation, updates, retrieval,
- Google Machine Learning certificate from Coursera, and deletion.
- **Collaborated on requirement gathering, software design, and development**, ensuring robust and scalable solutions.
- **Implemented unit testing** for all use cases using **JUnit and Mockito**, improving code reliability.
- **Worked with non-relational databases**, storing and managing data in **JSON format** for flexible data handling.
- **Generated API stubs using MockMVC** for **token authentication** and integrated with **third-party services**.
- **Refactored and optimized codebase**, following **best practices for maintainability and scalability**, while managing version control in **GitHub**.
- Designed high-performance, testable, and efficient Java 8 code, utilizing multi-threading and concurrency features.
- **Enhanced application security** by implementing **Spring Security** and **JWT-based authentication**.

LANGAN - SOFTWARE DEVELOPER INTERNSHIP

Angular Application Development

 New Jersey

 Apr 2022 - Feb 2023

- Developed a photo contest web application for Intranet tools using ASP.NET MVC Framework, C# as backend, and **Angular** as a frontend.
- Created a **responsive webpage** where users can upload pictures, and the end user can vote for the pictures they like.
- Developed endpoints for **SFPUC** (San Francisco Water Power Sewer) data using **C#**.
- Designed **RESTful Web APIs** for consumption in web projects, and created a service for other **developers** to consume in **web projects**.

TATA CONSULTANCY SERVICES - ASSISTANT SYSTEM ENGINEER (4 years)

BANCS: SOCGEN (Societe Generale) - BFSI

 New Delhi

 Oct 2017 - Mar 2022

- Designed and developed the architecture based on the requirements for TCS Reports applications using **Agile methodology**.
- Connect with the stakeholders to discuss the use case and gather functional documents.
- Gathering the financial requirements from the client and providing the architectural details to the team developers.
- Established different environments for dev, test, and staging server creation using WebLogic **Oracle** (ora12c) to connect with the database instances.
- Developed the backend for the banking domain (TCS BaNCS) using **JAVA**.
- **Automated** environment reboot and Application Build deployment. Managed environment using **Unix**
- Generated UI reports using **HTML5, CSS3, and JavaScript** to display the statement records of the end user.
- Created service-integrated messages using XML.
- Developed a responsive web browser using **CSS** and **Bootstrap** for mobile/iPad devices.
- Used **Java** to make changes in the backend and developed customer reports, which are used to get data from **MySQL** DB queries.

TECHNICAL SKILLS

Programming Languages	:	Java (Java 8), Python, JavaScript, C++, R, Shell Scripting
Frontend	:	Angular, ReactJS, Redux, HTML5, CSS3, Bootstrap, jQuery
Backend & APIs	:	Spring, Spring Boot, Node.js, Express.js, JDBC, RESTful APIs
Python & Automation	:	GenAI pipelines, Figma API integration, LangGraph orchestration, code scaffolding scripts
Databases	:	MySQL, Oracle, MongoDB, BigQuery
Cloud & DevOps	:	AWS, Microsoft Azure, Docker, NGINX, Jenkins (CI/CD)
Security	:	JWT Authentication
Testing & QA	:	JUnit, Mockito, Jest, React Testing Library, SonarQube, Fortify
Reporting	:	Jasper Reports
Tools & Build	:	Git, Maven, Dependency Injection
IDEs & Environments	:	IntelliJ IDEA, Eclipse, Visual Studio, PyCharm, WebStorm, Android Studio, Jupyter Notebook, RStudio
Operating Systems	:	Linux / Unix

CERTIFICATIONS

- AWS Cloud Practitioner CLF-02 valid April 2027. (Validation number - 240f30e623144ca99f814b4bc1da643f) , validate at [AWSLink](#)
- Modern Application Development held by NPTEL at IIT Madras

EDUCATION

New Jersey Institute of Technology

Master of Computer Science

CGPA - 3.7

 **Jan 2021 – Dec 2022**

Anna University

Bachelor of Computer Science

CGPA - 3.6

 **May 2013 - July 2017**

PROJECTS:

- **WebApp Calculator with calculation history** ([GitLink](#))
Developed a Python Flask web calculator with persistent CSV-based calculation history and dynamic display of past operations.
- **Information Articles Website** ([GitLink](#))
Developed a **responsive website** using HTML/CSS, deployed it with Docker to display technology-related articles.
- **Kaggle: Tabular Playground Series Competition** ([KaggleLink](#))
Built a **Titanic survival prediction model** in Python, achieving 79% accuracy and ranking in the top 550 on the leaderboard; performed web crawling using R.
- **Apriori Algorithm without using in-built Library Functions** ([GitLink](#))
Implemented a **Python-based recommendation system** for an online shopping website using the Apriori algorithm.
- **Vehicle Classification for Intelligent Transport Systems using CNN** ([GitLink](#))
Designed and trained **neural networks** (single hidden layer and simple CNN) with backpropagation and stochastic gradient descent to classify traffic vehicle images, achieving 90% accuracy.
